

## SPX High pressure hydraulic

## Quick, clean-break connections...

### High pressure hydraulic

2 construction types:

- **standard**
- **IB:** specially designed for offshore applications and any applications in environments generating high levels of corrosion.

### 4 bore diameters

6, 8, 12 and 16 mm.

### Clean-break

Flush-face, non-spill technology for the efficient protection of hydraulic circuits and the working environment:

- no pollution of hydraulic circuits due to penetration by external agents
- no pollution of the working environment due to spillage of hydraulic fluid.

### Easy connection

The guiding cone on the front face of the socket plays an important role in pre-centring the plug for “blind” connection.

### Easy to handle

The ergonomic shape of the socket sleeve provides a good grip for disconnection.

### High performance

Excellent flow rate.

### Safe

Robust locking is ensured by the large number of generously dimensioned balls and with a large contact surface area.

### Automatic

One-handed connection and disconnection.

### Visual identification of circuits

By coloured rings:

-  colourless
-  blue
-  red

for the immediate identification of circuits.

## ... for high pressure hydraulic circuits

### Dust protection

Efficient protection against external agents such as water and dust particles likely to prevent the correct operation of the locking sleeve. This option is especially recommended for installations in dirty environments.

### Protective dust caps

for sockets and plugs.

These protective metal dust caps are specially recommended for harsh environments such as steel industry, etc.

### Panel mounting

Mono (1 coupling or 1 plug) or duo (1 coupling + 1 plug) versions.

The duo version eliminates risks of inverting the supply and return circuits.

Fast installation with no need to disassemble the end connections. Positioning on the operator side.

### Connection under residual pressure

A central relief valve built into the socket or the plug valve allows for the reduction of the residual pressure in the circuit.

## Technical characteristics

	SPX 06	SPX 08	SPX 12	SPX 16
<b>Max. working pressure (bar)</b>	450	450	350	350
<b>Bore diameter (mm)</b>	06	08	12	16
<b>Shut-off</b> double				

### Construction

- High mechanical strength stainless steel
- High mechanical strength and high corrosion resistance stainless steel (IB option)

### Tightness

- Nitrile (NBR) seal
- Fluorocarbon (FPM) seal
- Ethylene-Propylene (EPDM) \* seal

### Protective dust cap

- As standard
  - Socket: POMH and Chloroprene (CR)
  - Plug: Chloroprene (CR)
- As option
  - Metallic dust caps

### Working temperatures

- for sockets and plugs without dust caps

Types of fluid	Seal code	Types of seal	Working temperatures (°C)
Mineral or synthetic hydraulic oils	No code	Nitrile (NBR)	- 15 to + 100 °C
	JV	Fluorocarbon (FPM)	- 10 to + 150 °C
Skydrol®	41B8	Ethylene-Propylene (EPDM)*	- 15 to + 100 °C

\* **Important!** It is strongly recommended not to use or bring this seal into contact with fluids of mineral origin (oil, fat, etc...).

- **for protective dust caps**
  - Chloroprene (CR): - 20 to + 100 °C
  - metallic: - 30 to + 150 °C
- **for sockets and plugs with protection against dust ingress option (/PP)**
  - 10 to + 150 °C

## Connection under residual pressure (PA option)

Option available on SPX 08 to 16 sockets and SPX 06 to 16 plugs.

### Situation 1: socket under residual pressure

Return to tank on the plug side.

SPX xx / PA socket → SPX xx plug

### Situation 2 : plug under residual pressure

Return to tank on the socket side.

SPX xx / PA plug → SPX xx socket

		SPX 06	SPX 08	SPX 12	SPX 16
Max. residual pressure for connection under pressure (bar)	Socket	-	150	150	150
	Plug	40	90	35	60

**Part-numbers of sockets and plugs with /PA option:** add the /PA code to the part-numbers pages 6 to 10.

Example of part-numbers:

- situation 1: SPX 08.1103/PA + SPX 08.7103
- situation 2: SPX 08.1103 + SPX 08.7103/PA

## Hydraulic flow rate / pressure drop charts

Speed (m/s)	Flow (l/min)			
	SPX 06	SPX 08	SPX 12	SPX 16
5	8.5	15	34	60
10	17	30	68	120

For a fluid speed comprised between 5 and 10 m/s, the max. working temperature must not exceed 60 °C.

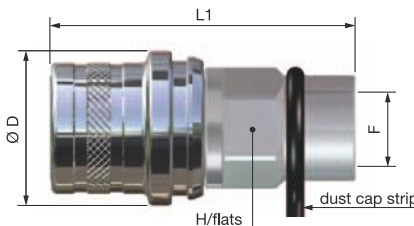

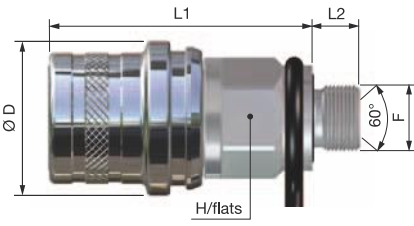

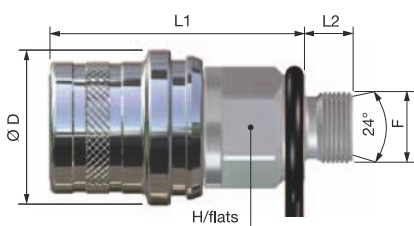

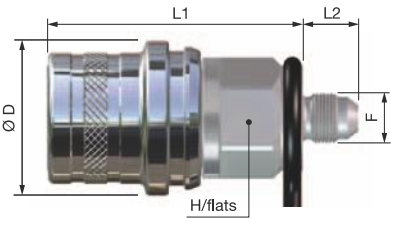

#### Test conditions:

- Fluid: water
- Direction of flow: socket → plug

# Part-numbers

All sockets and plugs are delivered as standard with a protective dust cap.

## Tightness

Sockets and plugs are delivered as standard with Nitrile (NBR) seals. Fluorocarbon (FPM) and Ethylene-Propylene (EPDM) seals are available on all models.

Add the corresponding code to the sockets and plugs part-numbers:

**JV:** Fluorocarbon (FPM) seals

**41B8:** Ethylene-Propylene (EPDM) seals

Eg.: SPX 08.1103/JV

## Protective dust caps

Add the **PP** code to the sockets and plugs part-numbers pages 6 and 7.  
Eg.: SPX 08.1103/PP

The **PP** function is only assured in connected position. Not compatible with the use of the coloured ring nor the panel mounting.

## Metallic protective dust caps

Red colour.

Add the **BMR** code to the sockets and plugs part-numbers.

Eg.: SPX 08.1103/BMR

## Circuit identification

Available on all diameters.

Add the colour code to the sockets and plugs part-numbers:

**KB** = blue

**KR** = red

Eg.: SPX 08.1103/KB

## Overall dimensions in connected position

$$L = (L1 \text{ socket} + L1 \text{ plug}) - X$$

Model	X (mm)	Model	X (mm)
SPX 06	18.5	SPX 12	23.5
SPX 08	21	SPX 16	24.5

## Overlength with protective dust caps

### • Standard dust caps

Model	A (socket)	B (plug)
SPX 06	10	4
SPX 08	11	5
SPX 12	11	5
SPX 16	11.5	7

### • Metallic dust caps

Model	A (socket)	B (plug)
SPX 06	11	4
SPX 08	11	4
SPX 12	11	5.5
SPX 16	11.5	5
